Synopsis

Summary of Sherpa/S–Lang module functions that load data into Sherpa

Description

The load functions of the Sherpa/S–Lang module are functional analogues to the Sherpa command READ, with a key difference: READ simply inputs file–based data into Sherpa, while the load functions may be invoked after data are manipulated at the command–line. A simple intuitive example is the processing of read–in time–series data before analysis, by shifting the photon arrival times by some constant (e.g., to make the arrival time of the first photon $t_{\text{new}} = 0$).

Summary of Sherpa/S–Lang Module load Functions

Name	Description
load_dataset	Loads a source dataset from a file or a S–Lang structure
load_backset	Loads a background dataset from a file or a S–Lang structure
{load_ascii load_bascii}	Loads a source or background dataset from an ASCII file
{load_fitsbin load_bfitsbin}	Loads a source or background dataset from a FITS binary table file
{load_pha load_bpha}	Loads a source or background dataset from a PHA–format file
load_pha2	Loads source datasets from a PHA Type II–format file
{load_image load_bimage}	Loads a source or background dataset from a FITS image file
load_back_from	Loads the contents of a background file named in the header of a PHA data file
load_arf	Loads the contents of an ARF file/structure, placing them in an RSP instrument model
load_rmf	Loads the contents of an RMF file/structure, placing them in an RSP instrument model
load_inst	Loads the contents of an ARF and RMF file/structure, placing them in an RSP instrument model
{load_inst_from load_binst_from}	Loads the contents of ARF and RMF files named in the header of a PHA data file, placing them in an RSP instrument model

Bugs

See the [Sherpa bug pages](#) online for an up–to–date listing of known bugs.
