stk_read_num

Context: [stackio](#)*Jump to:* [Description](#) [Example](#) [Bugs](#) [See Also](#)

Synopsis

Returns the selected element from a stack.

Syntax

```
String_Type stk_read_num( Stack_Type stack, Integer_Type N )
```

Description

Return the character string from a stack in position N. The first item in the stack is assigned the number "1", and sequentially thereafter. NULL is returned if any errors were encountered or if the requested entry was outside the range of the stack.

This function does not change the current position of the stack – i.e. that used by routines like `stk_read_next()`, `stk_set_current()`, and `stk_rewind()`.

Example

The following example shows you one way to loop through all the elements in a stack. See the [ahelp](#) page for `stk_read_next()` for another way to do this.

```
_for ( 1, stk_count(stk), 1 ) {
  variable i = ();
  variable elem = stk_read_num( stk, i );
  vmessage( "Stack: %s", elem );
}
```

Bugs

See the [bugs page for the stackio library](#) on the CIAO website for an up-to-date listing of known bugs.
