## str\_delete\_chars

Context: [slangrtl](#)

*Jump to:* [Description](#) [Example](#)

---

### Synopsis

Delete characters from a string

### Syntax

```
String_Type str_delete_chars (String_Type str, String_Type del_set)
```

### Description

This function may be used to delete the set of characters specified by `del_set` from the string `str`. The result is returned.

### Example

```
str = str_delete_chars (str, "^A-Za-z");
```

will remove all characters except A–Z and a–z from `str`.
