AHELP for CIAO 3.4

varmm_rl_editmode

Context: varmmrl

Jump to: Description Bugs See Also

Synopsis

Set the editing mode ("emacs" or "vi") of the ChIPS and Sherpa command line.

Syntax

```
Integer_Type varmm_rl_editmode( "emacs" )
Integer_Type varmm_rl_editmode( "vi" )
```

Description

The varmm_rl_editmode() function sets the editing mode of a Varmm−enabled application (currently ChIPS or Sherpa) to use either emacs or vi key bindings. The allowed input values for the input parameter string are "emacs" (the default) and "vi"; any other value will result in "emacs" being used (the comparison is case sensitive). It returns 0 on success, −1 on failure and may be called only once per application, with subsequent attempts returning −1.

Bugs

See the bugs page for the Varmmrl library on the CIAO website for an up−to−date listing of known bugs.
