

Bugs: ahelp

Bugs

1. *Browser support for ahelp"-i" and "-w" options*

The "-i" and "-w" options – which bring up the help pages in a browser – currently only work with the Netscape browser.

For Mac OS X users the following scripts can be used to make "ahelp -w" and "ahelp -i" work. The first will use Safari as the browser, whilst the second will use Netscape. Store the script in a file called netscape, make it executable, and place it in a directory in your path.

For Safari:

```
#!/bin/sh
url=echo $2 | cut -d\ ( -f2 | tr -d ' )'
\open -a Safari $url
```

For Netscape:

```
#!/bin/sh
url=echo $2 | cut -d\ ( -f2 | tr -d ' )'
\open -a Netscape $url
```
