

Bugs: GUIs

Bugs

1. **Warning: XtRemoveGrab asked to remove a widget not on the list (Red Hat 6.2, Red Hat 8.0, and Mac OS X)**

On the Red Hat 6.2, Red Hat 8.0, and Mac OS X platforms, the GUIs ([prism](#), [filtwin](#), [taskmonitor](#), and [peg](#)) will issue this message when the GUI is closed via an XPA quit command.

```
unix% peg &
unix% xpsaset -p peg quit
Warning: XtRemoveGrab asked to remove a widget not on the list
```

It can be ignored. Other exit methods, such as the Exit option in the File menu or the window-manager's Close option, do not produce this message.

2. **Some messages are echoed to the terminal instead of the GUI dialog box.**
3. **The default browser for the Help -> On Application menu option is Netscape. (29 Jan 2007) (Mac OS X)**

By default, the Help -> On Application menu is configured to use Netscape, which is not commonly available on Mac OS X machines. An error of this sort is seen:

```
Couldn't open file: /Users/username/local/ciao3411/doc/html/prism.html
```

Workarounds:

1. Edit \$ASCDS_INSTALL/config/system/CXCdefaults to remove the "-a Netscape" from the HelpBrowserOpenFILECommand. It will then look like:

```
*HelpBrowserOpenFILECommand : open $ &
```

2. Create a local ~/.CXCdefaults file with this syntax:

```
unix% cat > ~/.CXCdefaults
*HelpBrowserOpenFILECommand : open $ &
```

4. **"Browse CIAO installation README" from Help -> About menu does not work. (29 Jan 2007) (Mac OS X)**

If you select the Help -> About menu item and then select the "Browse CIAO installation README" button, an X terminal appears with the error message:

```
xterm: Can't execvp /bin/more: No such file or directory
```

On Mac OS X, the program is /usr/bin/more.

Bugs: GUIs – CIAO 3.4

Workaround:

Open the local copy of the README, `$ASCDS_INSTALL/README`, with the program or pager of your choice.
