

Bugs: rmfimg

Bugs

1. *Requires a uniformly-gridded RMF*

The output from `mkrmf` works correctly as input to `rmfimg`.

2. *Block names containing blank spaces are treated as bad syntax*

If the extension in the input file name has a space in it, the tool will fail. This example uses a Con-X RMF:

```
unix% rmfimg "conx-ea-101106-b10.rsp[SPECRESP MATRIX]" rsp.img
# (CIAO 4.0): Failed to open conx-ea-101106-b10.rsp[SPECRESP MATRIX]:
Must have RMF file
```

Workaround:

Refer to the block by number instead of name, e.g. "conx-ea-101106-b10.rsp[3]".

Bugs: rmfimg – CIAO 3.4
