## Image display features users like the least

## Back to the Survey

- 9 color control
- 13 karma is written by one person, who is very obstinate and stubborn about admitting there are bugs and making modifications
- 14 none
- 18 ds9 crashes when viewing a level 1.5 file
- 25 Doesn't quite output useful (publishable) postscript images.
- 28 IDL slow process to get the image just right
- 35 I'm not an imaging person.
- 38 you don't want to go there...
- 47 Can't make multiple overlays on a given image.
- 67 Scripting ds9 is not easy and the xpa interface still doesn't seem to work with enough applications. IDL's cursor readback and handling of several images for multiwavelength work are inadequate.
- 72 no way to recover 1:1 zoom if I forget how many times I've binned & zoomed an evtfile
- 77 the "comma" syntax (plot,x,y)
- 82 ds9 sometimes when WCS matching, ds9 zooms out or in. cannot make journal quality images
- 83 hard to control the locations of the characters (dis45)
- 84 crash when working with very large images
- 90 In terms of X-ray analysis, my most often used tool is ds9. I don't particularly like the way the menus are layed out -- the "double depth" of, e.g., the region window is confusing. Also, I have been unable to find a way to make ds9 "remember" settings (e.g., default to saving regions in ciao format). A simple "save settings" button would be nice.
- 100 way too many options to keep track of, and it's hard to print out the ds9 manual.
- 102 Not easy to install with other interfaces. unclear errors messages when it crashes (XPA related problems) or freezes.
- 103 IDL is expensive.
- 106 The version of xpa and ds9 that come with ciao are out of date, and you get problems with xpa if you try and use a more recent ds9.

## Software Survey Results - CIAO 3.4

- 111 no macros => changing a picture requires doing a lot of work an additional time
- 112 ds9 Can't control all the defaults. No batch processing interface.
- 120 ds9 and xpa have weak and incomplete documentation
- 126 The CMYK images that come out of ds9 are sometimes horrendously ugly color schemes.
