In this talk....

- ✓ *Brief Introduction*
- ✓ *Morphology parameter results*
 - ✓ *2D Beta profile simulation*
 - ✓ *Hydro dynamic simulation*
 - ✓ *Chandra Observation*
- ✓ *Future work*

Introduction

- ✓ *X-ray Cluster morphology according to Jones and Forman (1992)*
- ✓ *Identification of cluster merger*
- ✓ *Existing techniques*
- ✓ *Morphology parameters- Gini, M_{20} , Concentration, Asymmetry, Smoothness, Gini 2nd order and Ellipticity*

1, Gini and Gini 2nd order moment (Abraham et al.2003, Lotz et al. 2004)

$$G = \frac{1}{|\bar{X}|n(n-1)} \sum_i^n (2i - n - 1)|X_i|.$$

$X_i = i^{\text{th}}$ pixel at X

$n = \text{total number of pixels}$

$\bar{X} = \text{mean pixel value}$

2, M_{20} and Ellipticity parameters

$$M_{\text{tot}} = \sum_i^n M_i = \sum_i^n f_i [(x_i - x_c)^2 + (y_i - y_c)^2]$$

$$M_{20} \equiv \log_{10} \left(\frac{\sum_i M_i}{M_{\text{tot}}} \right), \text{ while } \sum_i f_i < 0.2 f_{\text{tot}}$$

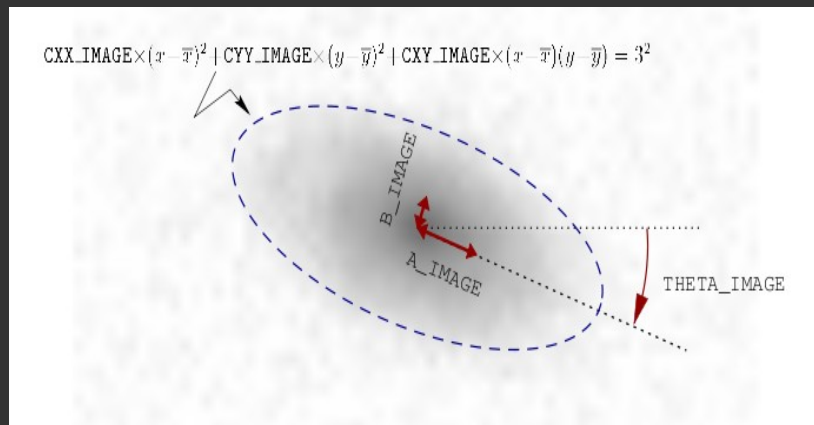

(Lotz et al. 2004)

$$A^2 = \frac{\overline{x^2} + \overline{y^2}}{2} + \sqrt{\left(\frac{\overline{x^2} - \overline{y^2}}{2} \right)^2 + \overline{xy^2}},$$

$$B^2 = \frac{\overline{x^2} + \overline{y^2}}{2} - \sqrt{\left(\frac{\overline{x^2} - \overline{y^2}}{2} \right)^2 + \overline{xy^2}}.$$

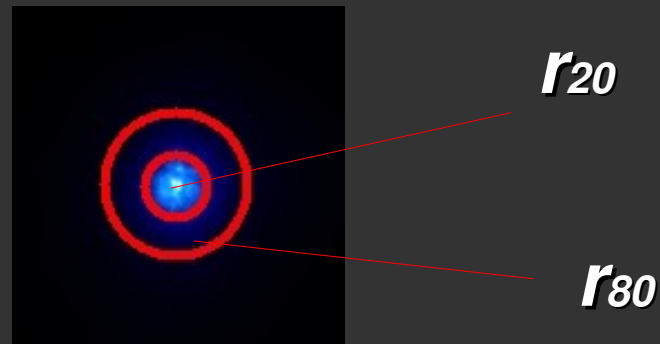

Ellipticity = 1 - B/A

(Stobie 1980, 1986)

3, CAS parameters (Bershady et al. 2000 ,Conselice, 2003)

$$C = 5 \log \left(\frac{r_{80}}{r_{20}} \right)$$

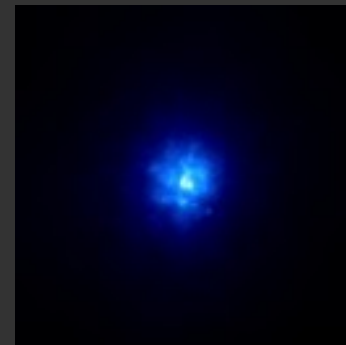

$$A = \frac{\sum_{i,j} |I(i,j) - I_{180}(i,j)|}{\sum_{i,j} |I(i,j)|} - B_{180}$$

$$A = \text{abs}(I-R)/I$$

I

R

$\text{abs}(I-R)$

$$S = \frac{\sum_{i,j} |I(i,j) - I_S(i,j)|}{\sum_{i,j} |I(i,j)|} - B_S$$

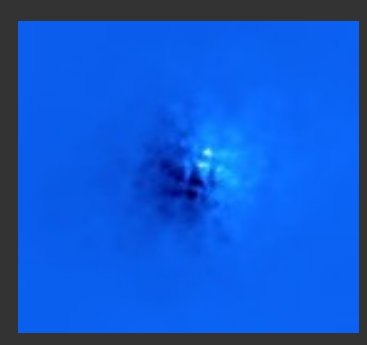

$$S = (I-B)/I$$

I

B

$I-B$

Beta model X-ray clusters simulation

$$f(x,y) = f(r) = A \times (1 + (r / r_0)^2)^{-\beta}$$

Where A = Amplitude of flux

r₀ = core radius

β = power law index

Z=0.1, 1.85 kpc/”, pixel size=2.5”

✓ ***Barycenter of image***

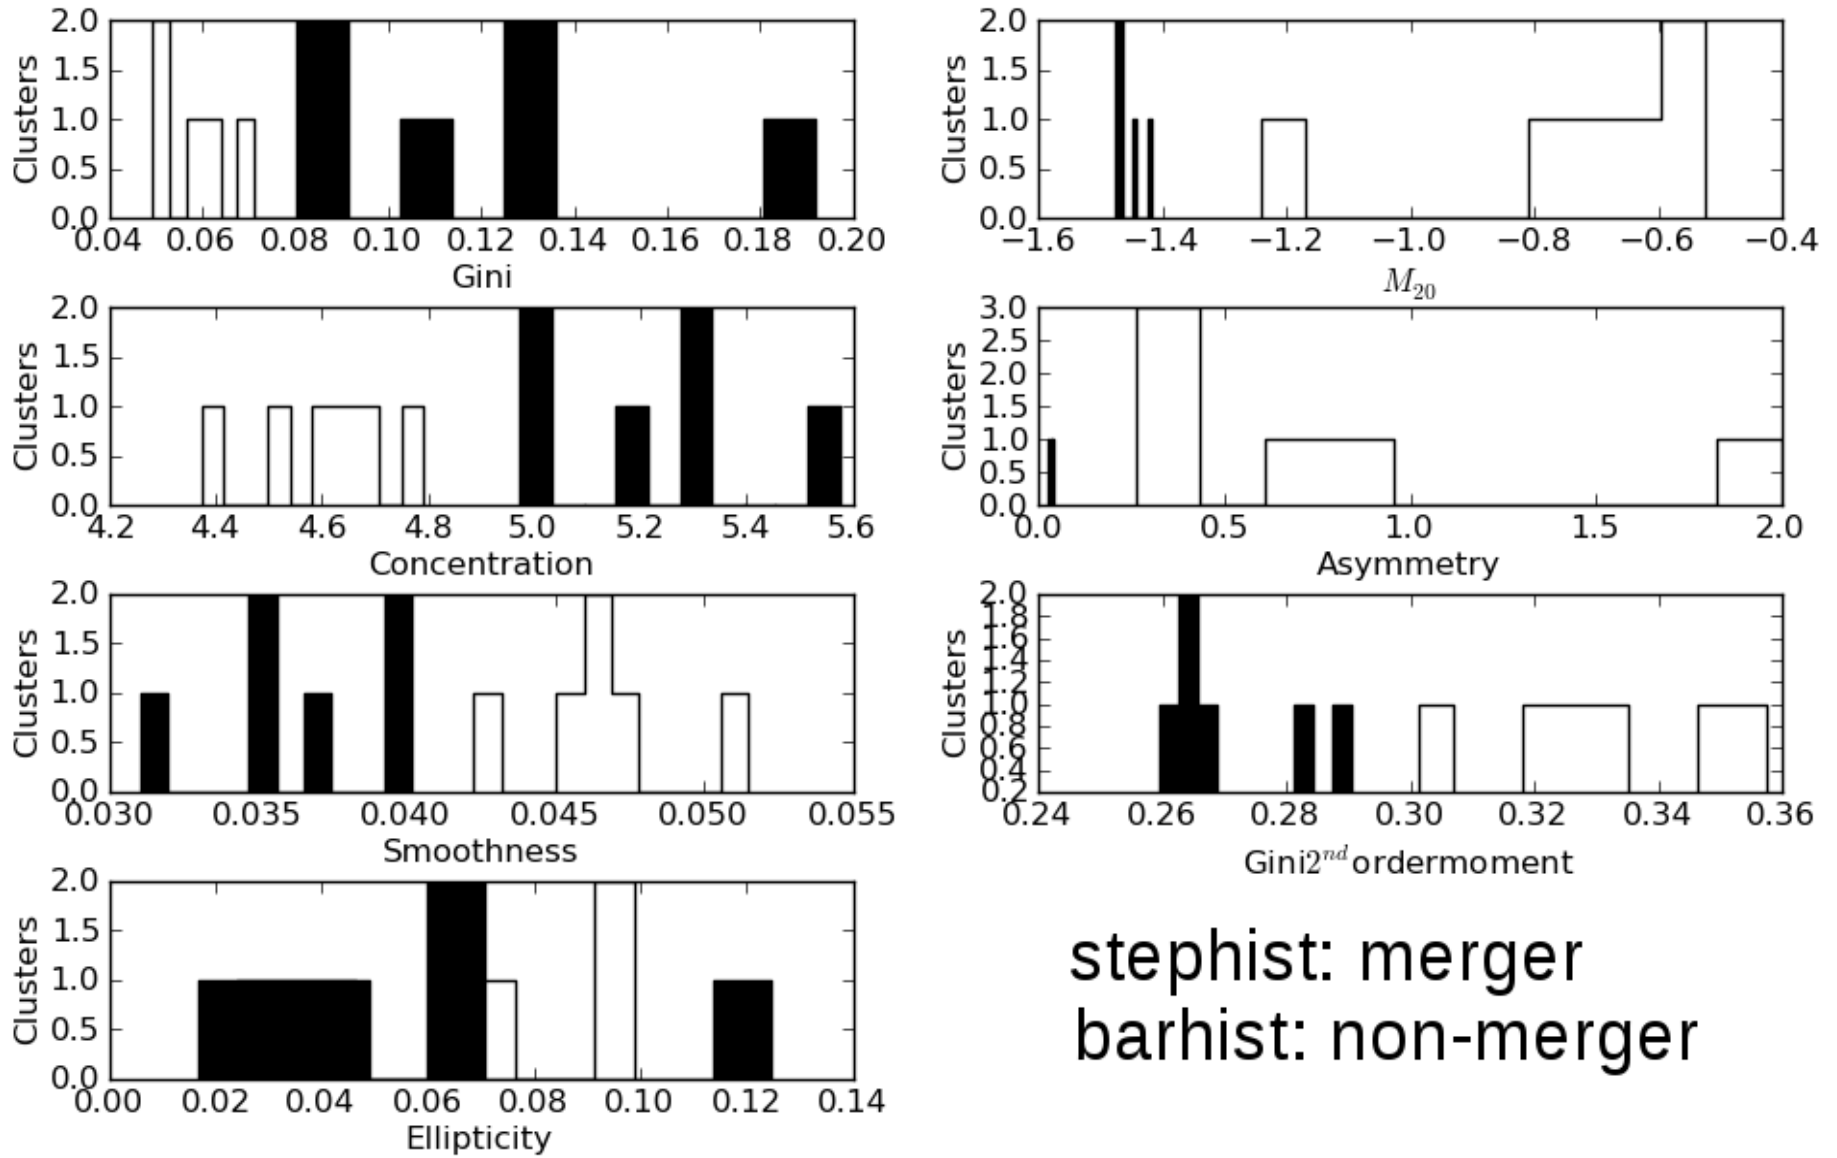

$$X = \frac{\sum I_i x_i}{\sum I_i} \quad Y = \frac{\sum I_i y_i}{\sum I_i}$$

Where X, Y are Center of image

I_i is pixel value at ith pixel

x_i, y_i are pixel position

250kpc_segmentation

stephist: merger
barhist: non-merger

250kpc_segmentation

Image effects

- ✓ *Effect of noise*
- ✓ *Effect of rebinning*
- ✓ *Effect of ccd gap*
- ✓ *Effect of point sources*

S/N=0.1,bin=3

S/N=3,bin=5

S/N=11,bin=10

Marx Chandra X-ray telescope simulation

Simulation parameters

Exposure time: 50ks

Detector: ACIS-I

*Spectrum: Thermal(wabs*mekal)
(0.1-10 keV)*

$nH=3 \times 10^{20}$

T=4keV

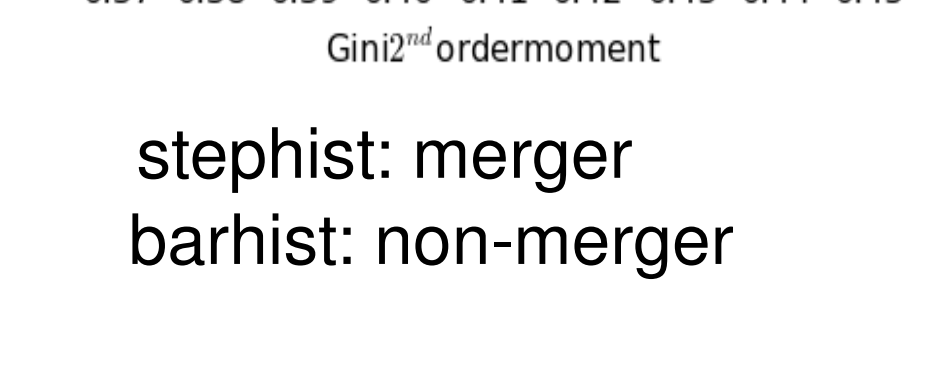

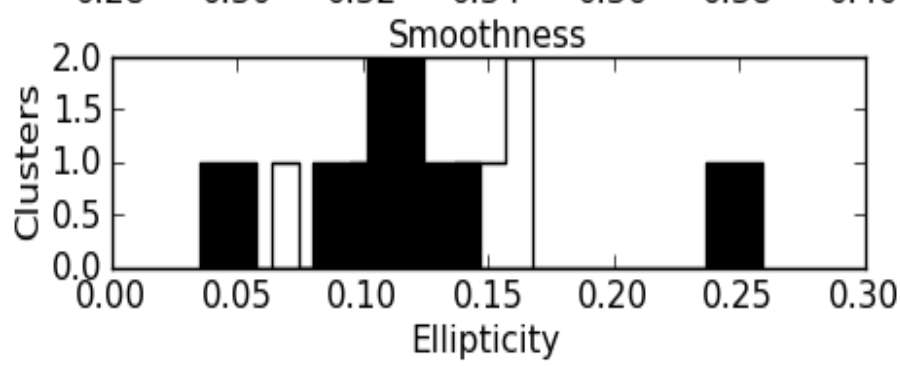

Abun=0.3

Pixel size=2''

*Level 2 event file
(acis_process_events)*

Beta images Chandra simulation

stephist: merger
barhist: non-merger

Beta images Chandra simulation

- Relaxcluster
- × Non-relaxcluster

Hydrodynamic simulation

- ✓ *20 galaxy clusters of $6e14$ to $2e15 M_{\text{sun}}$ (Vazza et al. 2010)*
- ✓ *$z=0$*
- ✓ *25kpc of pixel size*
- ✓ *Relaxed, post merger, complex merger*
- ✓ *Bolometric luminosity X-ray gas images*

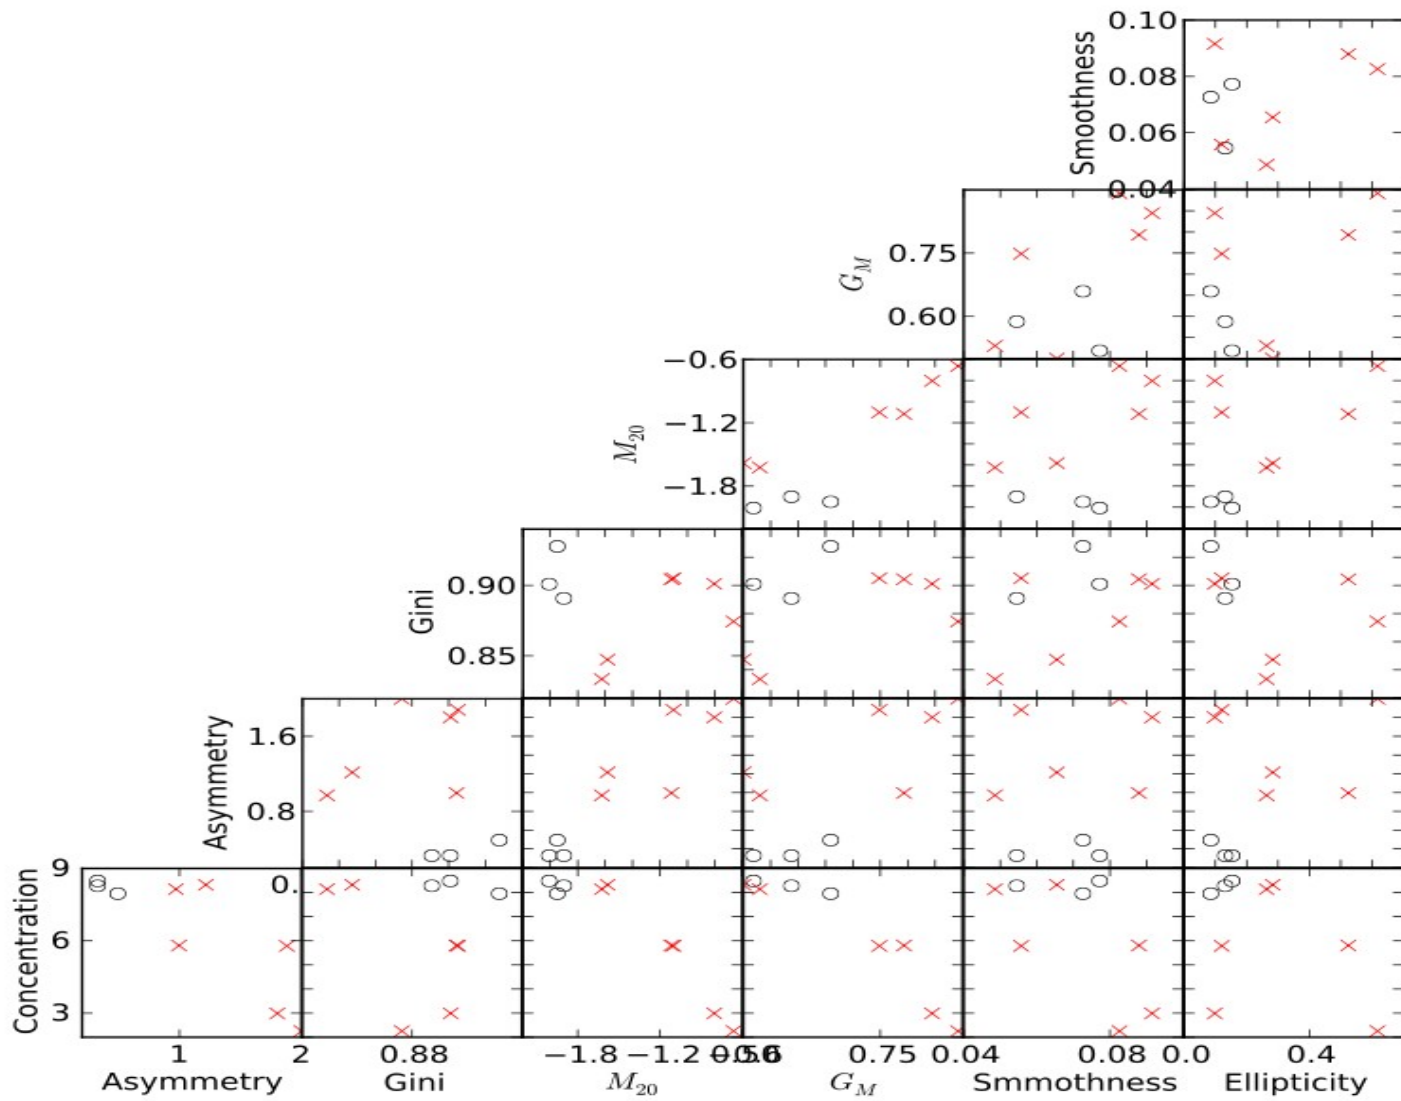

50radi_cluster

stephist: merger
barhist: non-merger

- Relaxcluster
- × Non-relaxcluster

50radi_cluster

Real Chandra observation

- ✓ *Sample from the Chandra X-ray Cosmology (Vikhlinin et al. 2010)*
- ✓ *100 clusters*
- ✓ *Low (0.02-0.2) and high (0.3-0.9) redshift sample*
- ✓ *Available X-ray gas properties*
- ✓ *A1795, A2597, A2029, A209, A2142*
- ✓ *A754, A3558, A2256, A2147, A3266*

200kpc_segmentation

stephist: merger
barhist: non-merger

200kpc_segmentation

Summary and outlook

- ✓ *Morphology parameters can be used to distinguish merger and non-merger cluster*
- ✓ *morphology parameters vs. radial distance plots*
- ✓ *3D parameters plots*
- ✓ *Compare parameters with properties of X-ray gas*
- ✓ *Line of sight merger*
