## `__get_defined_symbols`

Context: [slangrtl](#)

*Jump to:* [Description](#) [See Also](#)

---

### Synopsis

Get the symbols defined by the preprocessor

### Syntax

```
Integer_Type __get_defined_symbols ()
```

### Description

The `__get_defined_symbols` functions is used to get the list of all the symbols defined by the S-Lang preprocessor. It pushes each of the symbols on the stack followed by the number of items pushed.
