

*AHELP for CIAO 3.4*

autoload

Context: [slangrtl](#)*Jump to:* [Description](#) [Example](#) [See Also](#)

Synopsis

Load a function from a file

Syntax

```
autoload (String_Type funct, String_Type file)
```

Description

The `autoload` function is used to declare `funct` to the interpreter and indicate that it should be loaded from file when it is actually used.

Example

Suppose `bessel_j0` is a function defined in the file `bessel.sl`. Then the statement

```
autoload ("bessel_j0", "bessel.sl");
```

will cause `bessel.sl` to be loaded prior to the execution of `bessel_j0`
