Synopsis

Blackbody as a function of frequency. Integration ON.

Description

Blackbody emission calculated as a function of frequency v using Wien's law (hv >> kT):

$$f(v) = A (2hv^3/c^2) \exp(-hv/kT) ,$$

where A is the amplitude, T is the temperature in Kelvin, and h, c, and k are Planck's constant, the speed of light, and Boltzmann's constant, respectively.

BBODYFREQ Parameters

Number	Name	Description
1	T	temperature T (K)
2	ampl	amplitude A

See "ahelp integrate" for further information about source model integration.

Bugs

See the Sherpa bug pages online for an up-to-date listing of known bugs.
