## bstring\_to\_array

Context: [slangrtl](#)

*Jump to:* [Description](#) [See Also](#)

---

### Synopsis

Convert a binary string to an array of characters

### Syntax

```
UChar_Type[] bstring_to_array (BString_Type b)
```

### Description

The `bstring_to_array` function returns an array of unsigned characters whose elements correspond to the characters in the binary string.
