

*AHELP for CIAO 3.4*

get_fit

Context: [sherpa](#)

Jump to: [Description](#) [Example](#) [CHANGES IN CIAO 3.2](#) [Bugs](#) [See Also](#)

Synopsis

Module functions to get information about the quality of a fit.

Syntax

```
Array_Type get_fit([Integer_Type | Array_Type])
Array_Type get_goodness([Integer_Type | Array_Type])

Error Return Value: NULL

Arguments:

(1) data set number (default all data sets), or an array of data set
numbers.
```

Description

The functions `get_fit()` and `get_goodness()` return information about the quality of fit. Currently, the function returns an array of S-Lang variables of `Struct_Type`. The array is of length 1 if information for only one data set is requested, or $N+1$ if information for N data sets is requested. In the latter case, the total statistic, etc., is given by the first element of the returned array.

The output `Struct_Type` variable contains the following fields:

- `dataset`: the number of the fit dataset; if `NULL`, then the `Struct_Type` variable contains information about all fits.
- `datatype`: one of `source`, `bkgd`, or `total`.
- `stat`: the observed statistic value, or the sum of the statistic values if `datatype` is set to `total`.
- `numbins`: the number of bins involved in the fit.
- `dof`: the number of degrees of freedom: `numbins` minus the number of model free parameters.
- `rstat`: the reduced statistic, `stat` divided by `dof`; this field is `NULL` for the statistics `CASH` and `BAYES`.
- `qval`: the `q` value (see `get_qvalue()`); this field is `NULL` for the statistics `CASH` and `BAYES`.

See the related Sherpa command GOODNESS for more information.

Example

```
[...fit two datasets...]
sherpa> res = get_fit()
sherpa> print(res[0])
dataset      = NULL      # the total stat, etc., are shown
datatype     = total     #
stat         = 127.821
numbins      = 200
dof          = 197
rstat        = 0.64884
qval         = 0.999964
sherpa> res = get_res(2)
sherpa> print(res[0])
dataset      = 2        # only the fit info for dataset 2 shown
datatype     = source
stat         = 63.9103
numbins      = 100
dof          = 98
rstat        = 0.652146
qval         = 0.996969
```

CHANGES IN CIAO 3.2

The `get_fit()` function now works correctly when given an argument. Prior to CIAO 3.2 it would ignore the supplied argument.

Bugs

See the [Sherpa bug pages](#) online for an up-to-date listing of known bugs.
