

 AHELP for CIAO 3.4

paramclose

Context: [paramio](#)

Jump to: [Description](#) [Example](#) [See Also](#)

Synopsis

Close a parameter file opened by paramopen.

Syntax

```
paramclose( Param_File_Type )
```

Description

Close the parameter file associated with the given Param_File_Type variable – the return value of paramopen().

As with all the paramio routines, the PF_Errno variable is set to 0 on success, or on error it is set to one of the error codes listed in the paramio documentation.

Example

```
variable fp = paramopen("dmextract");
% use fp in other paramio routines
paramclose(fp);
```

Here we open the parameter file for dmextract and then close it. In real–world applications you would use one of the other paramio routines to query or change the parameter file in between opening and closing it.
