## set\_slang\_load\_path

Context: [slangrtl](#)

*Jump to:* [Description](#) [Example](#) [See Also](#)

### Synopsis

Set the value of the interpreter's load-path

### Syntax

```
set_slang_load_path (String_Type path)
```

### Description

This function may be used to set the value of the delimiter-separated search path used by the evalfile and autoload functions for locating files.

### Example

```
public define prepend_to_slang_load_path (p)
{
    variable s = stat_file (p);
    if (s == NULL) return;
    if (0 == stat_is ("dir", s.st_mode))
        return;

    variable d = path_get_delimiter ();
    set_slang_load_path (strcat (p, d, get_slang_load_path ()));
}
```

Some applications may not support the built-in load-path searching facility provided by the underlying library.
