

AHELP for CIAO 3.4

setpgid

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Set the process group–id

Syntax

```
Int_Type setpgid (Int_Type pid, Int_Type gid)
```

Description

The setpgid function sets the group–id gid of the process whose process–id is pid. If pid is 0, then the current process–id will be used. If pgid is 0, then the pid of the affected process will be used.

If successful zero will be returned, otherwise the function will return –1 and set errno accordingly.

This function is not supported by all systems.
