AHELP for CIAO 3.4

varmm_rl_blink

Context: varmmrl

Jump to: Description Bugs See Also

Synopsis

Sets the "blink" mode of the ChIPS and Sherpa command line.

Syntax

```
Integer_Type varmm_rl_blink( 0 )
Integer_Type varmm_rl_blink( 1 )
```

Description

This function allows you to toggle the "flick to open bracket when you enter the matching close bracket" behaviour of the tools that use the S−Lang readline module (currently Sherpa and ChIPS). An input of 0 turns off the blinking, a non−zero input turns it on (which is the default). The function returns the previous setting (either 0 or 1).

Bugs

See the bugs page for the Varmmrl library on the CIAO website for an up−to−date listing of known bugs.
