

Bugs: acis_fef_lookup

acis_fef_lookup is not a CIAO tool; it is a script which is available for download from the [Scripts page](#).

Bugs

1. *Using acis_fef_lookup*
(Red Hat 7)

The Red Hat 6 binaries for [acis_fef_lookup](#) crash at the end when run on Red Hat 7; note that RH7 is not a supported CIAO platform. The same binaries run fine on Red Hat 6 or Red Hat 8, which *are* supported.

Workarounds:

1. Use the CIAO 2.3 version of [acis_fef_lookup](#) instead. The tool's functionality has not changed since that release.

To do so, first [download ciao23_acis_fef_lookup](#). Then, from a window running CIAO (note that this needs to be done by whomever owns the CIAO installation, e.g. your sysadmin):

```
unix% rm $ASCDS_CONTRIB/bin/acis_fef_lookup  
unix% mv ciao23_acis_fef_lookup $ASCDS_CONTRIB/bin/acis_fef_lookup
```

2. Upgrade the OS to Red Hat 8, which is officially supported for CIAO.
