## Bugs: reproject\_aspect

There are currently no known bugs.

A list of bugs fixed in CIAO 3.4 is included at the end of this document.

---

### Bugs fixed in CIAO 3.4

The following is a list of bugs that were fixed in the CIAO 3.4 software release.

1. *The parameters of the underlying tools of the `reproject_aspect` script are not cleared before the script is run.*

The parameters of the underlying tools of the `reproject_aspect` script (`wcs_match` and `wcs_update`) are not getting cleared before `reproject_aspect` is run. This can cause older filenames to show up in status messages when `verbose > 0`.

#### **Workaround:**

Users should `unlearn` `wcs_match` and `wcs_update` in addition to `reproject_aspect` to clear out any leftover parameters before running the tool.
