

Spirals in Virgo

Roberto Soria
(UCAS/NAOC)

Main contributors for this talk:

Mari Kolehmainen, Christian Motch (Strasbourg)
Alister Graham, Ben Davis (Swinburne)
Doug Swartz (NASA/MSFC)
Tom Maccarone (Texas Tech)
Laura Ferrarese (NRC Canada)
Alessandro Boselli (LAM Marseille)

Outline

- Design features of our survey
- Gallery of pretty pictures
- Main results: ULXs and nuclear BHs

HI map of Chandra spirals (Chung et al 2009)

Virgo Ellipticals and Spirals

- **100 early-type galaxies:**
AMUSE survey (Gallo, Treu, Plotkin,...)
Chandra + HST
- **74 spiral galaxies:**
our new survey (various papers in prep.)
Chandra + NGVS

X-rays: Chandra Large Project (PI Soria)

550 ks + archival data

74 spirals with $SFR > \sim 0.3 M_{\text{sun}}/\text{yr}$

Point-source detection limit $\sim 3E38 \text{ erg/s}$

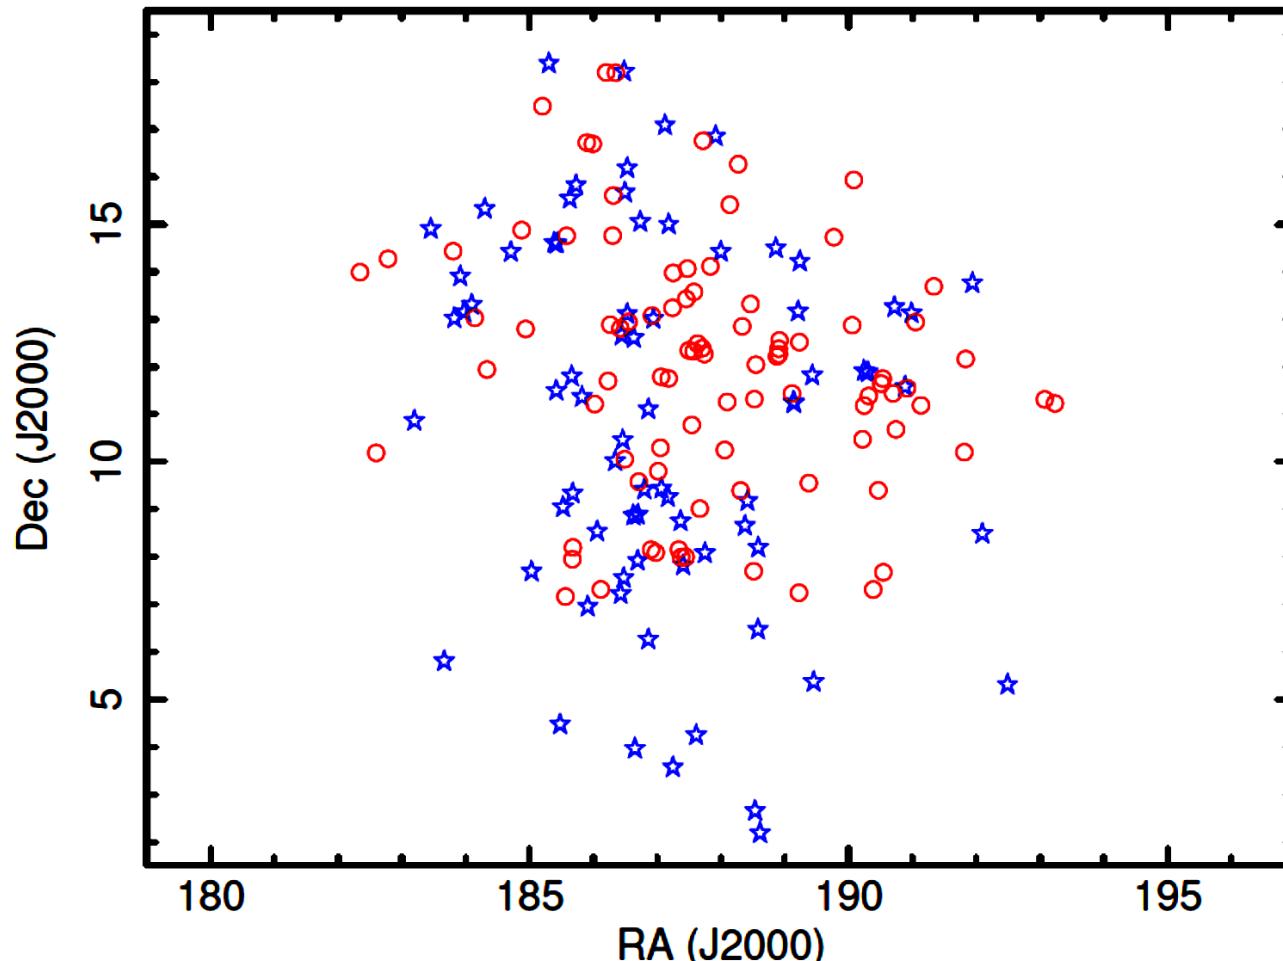

Optical: Next Generation Virgo Cluster Survey

(Ferrarese, Cote', Lancon, et al)

104 square degrees observed with CFHT Megaprime

Point-source detection limit $g' \sim 25.7 \text{ ABmag}$

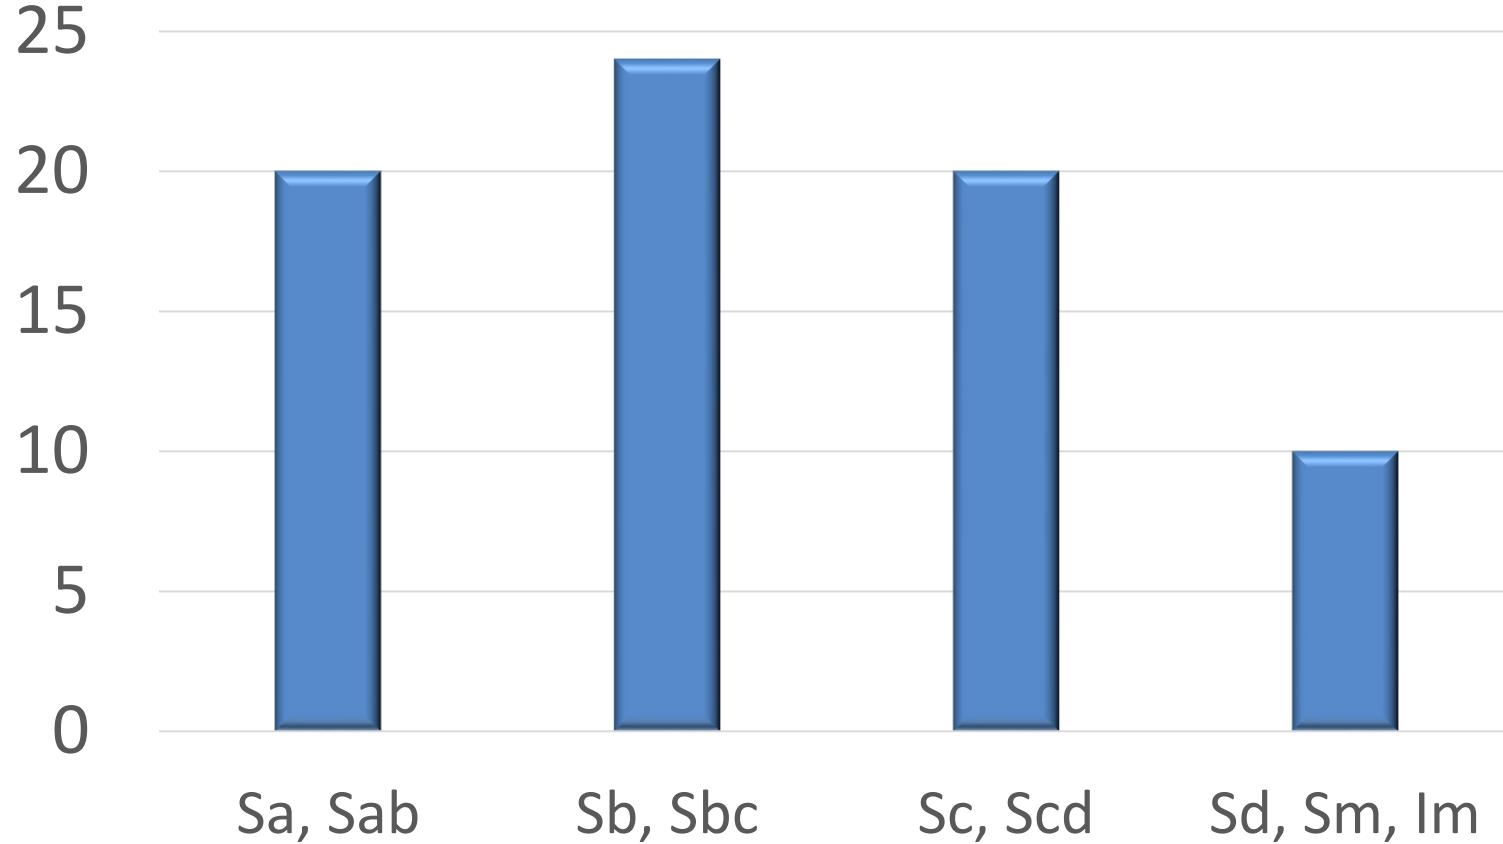

Virgo Ellipticals and Spirals

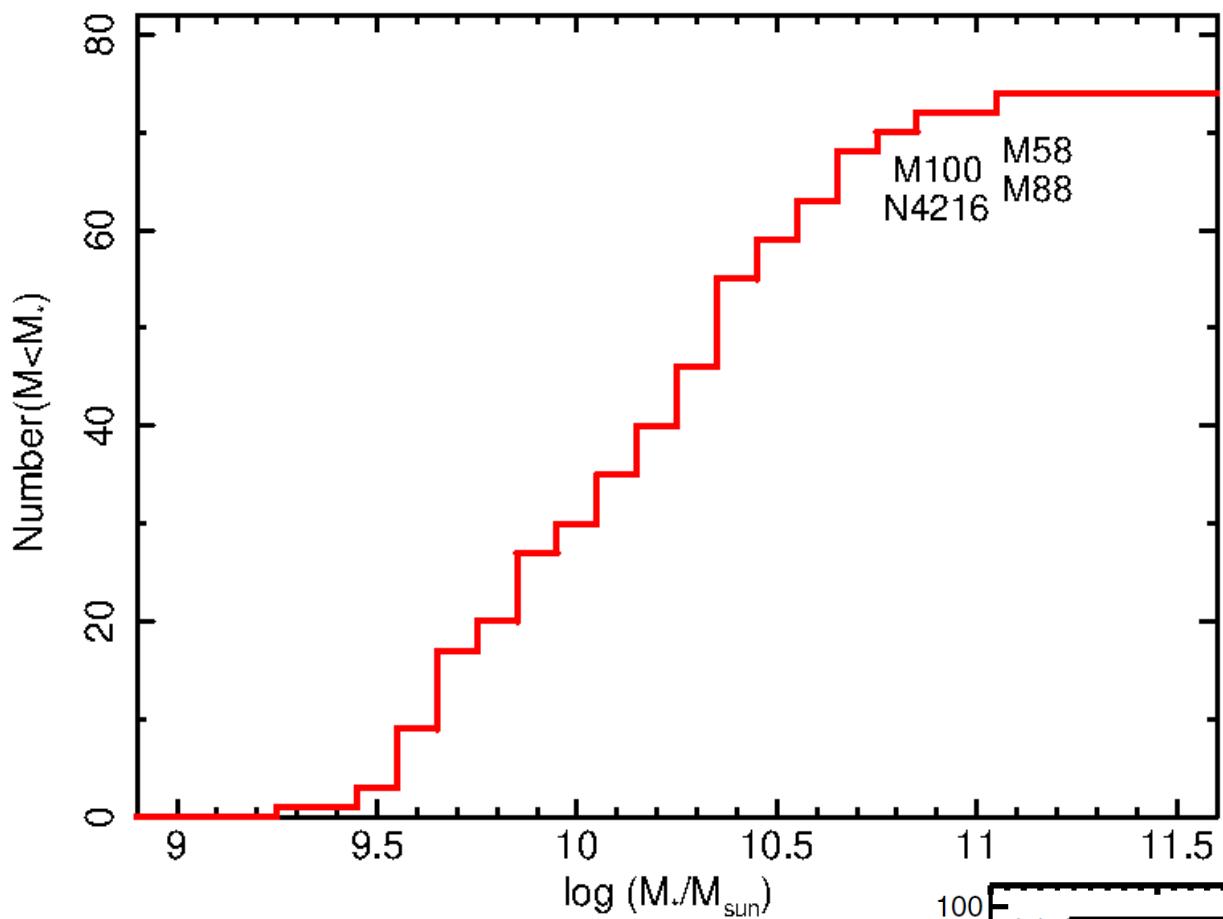

Red = elliptical galaxies in the AMUSE survey

Blue = spiral galaxies in our survey

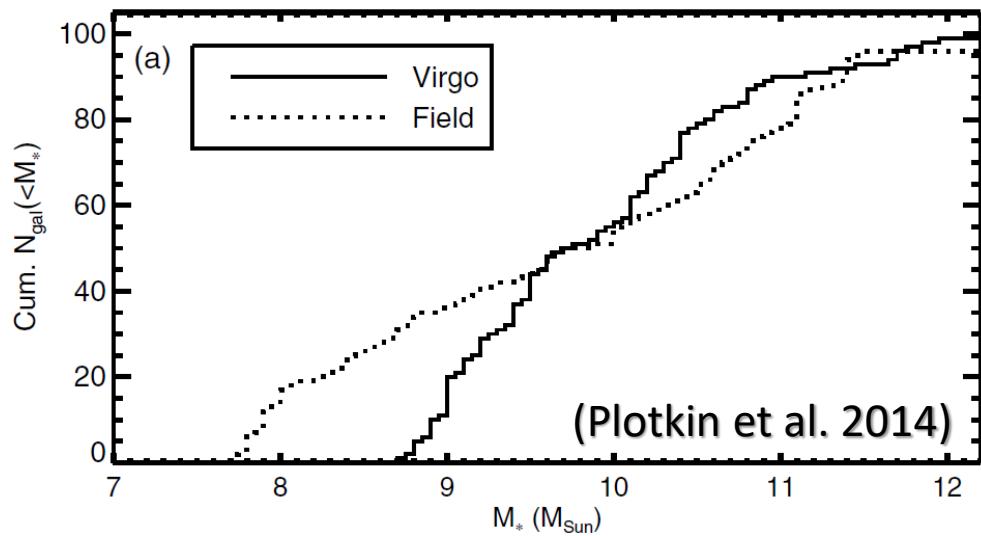

Hubble types of our 74 spirals

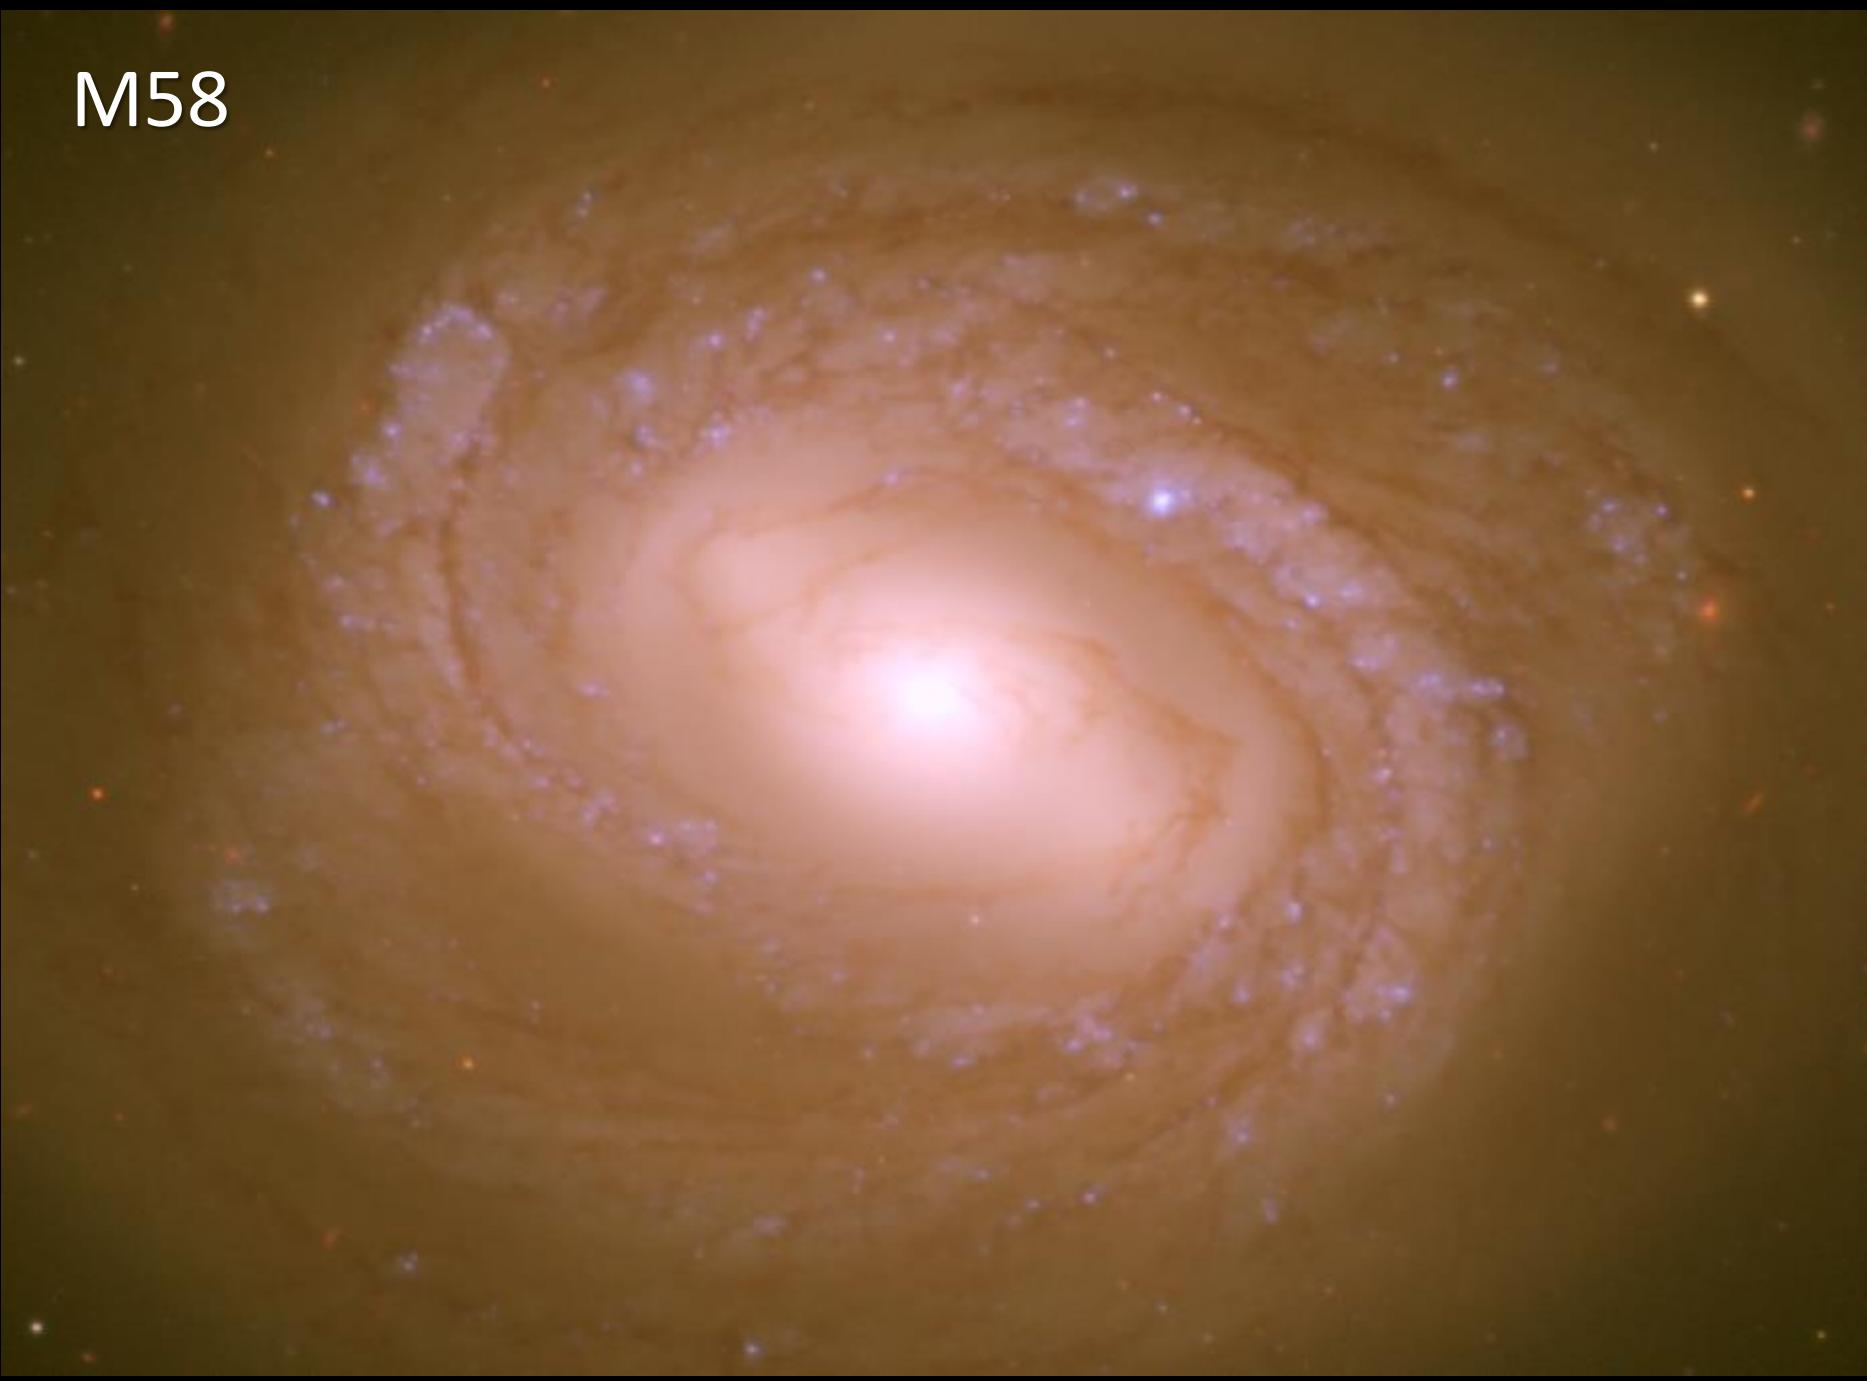

Mass distribution of the 74 spirals

Comparison with the mass distribution
of the E galaxies in the AMUSE sample

Fraction of nuclei $> 3e38$ erg/s

**Active fraction $\sim 30\%$ for the AMUSE sample
(Gallo et al 2010, Plotkin et al 2014)**

Search for IMBHs in the nuclei of bulgeless spirals

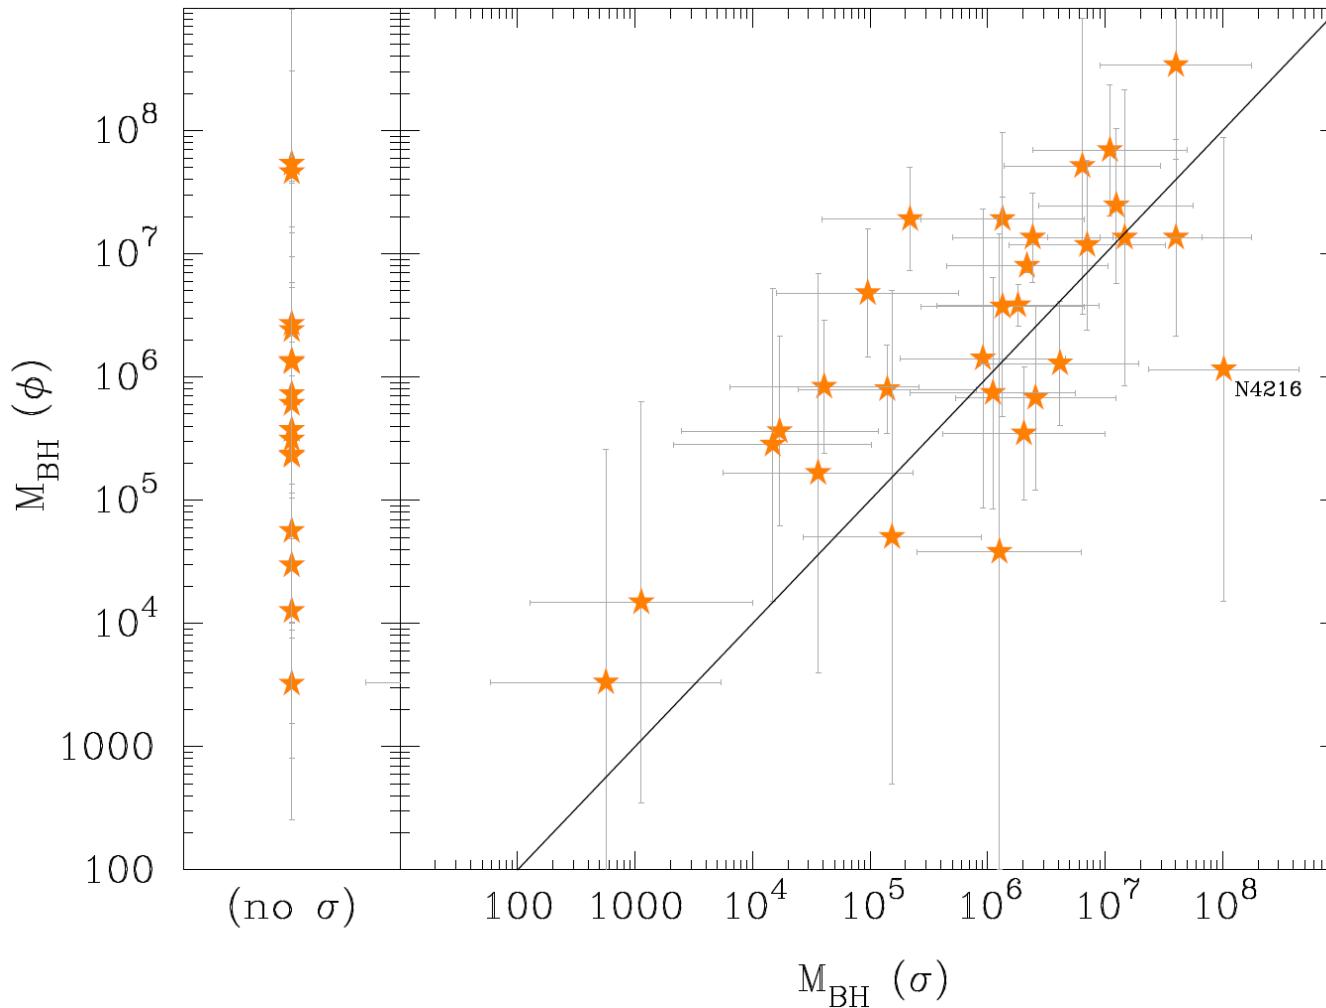

Three proxies for nuclear BH masses

M_{BH} — σ relation

M_{BH} — M_* relation

M_{BH} — ϕ relation (pitch angle relation)

Search for IMBHs in the nuclei of bulgeless spirals

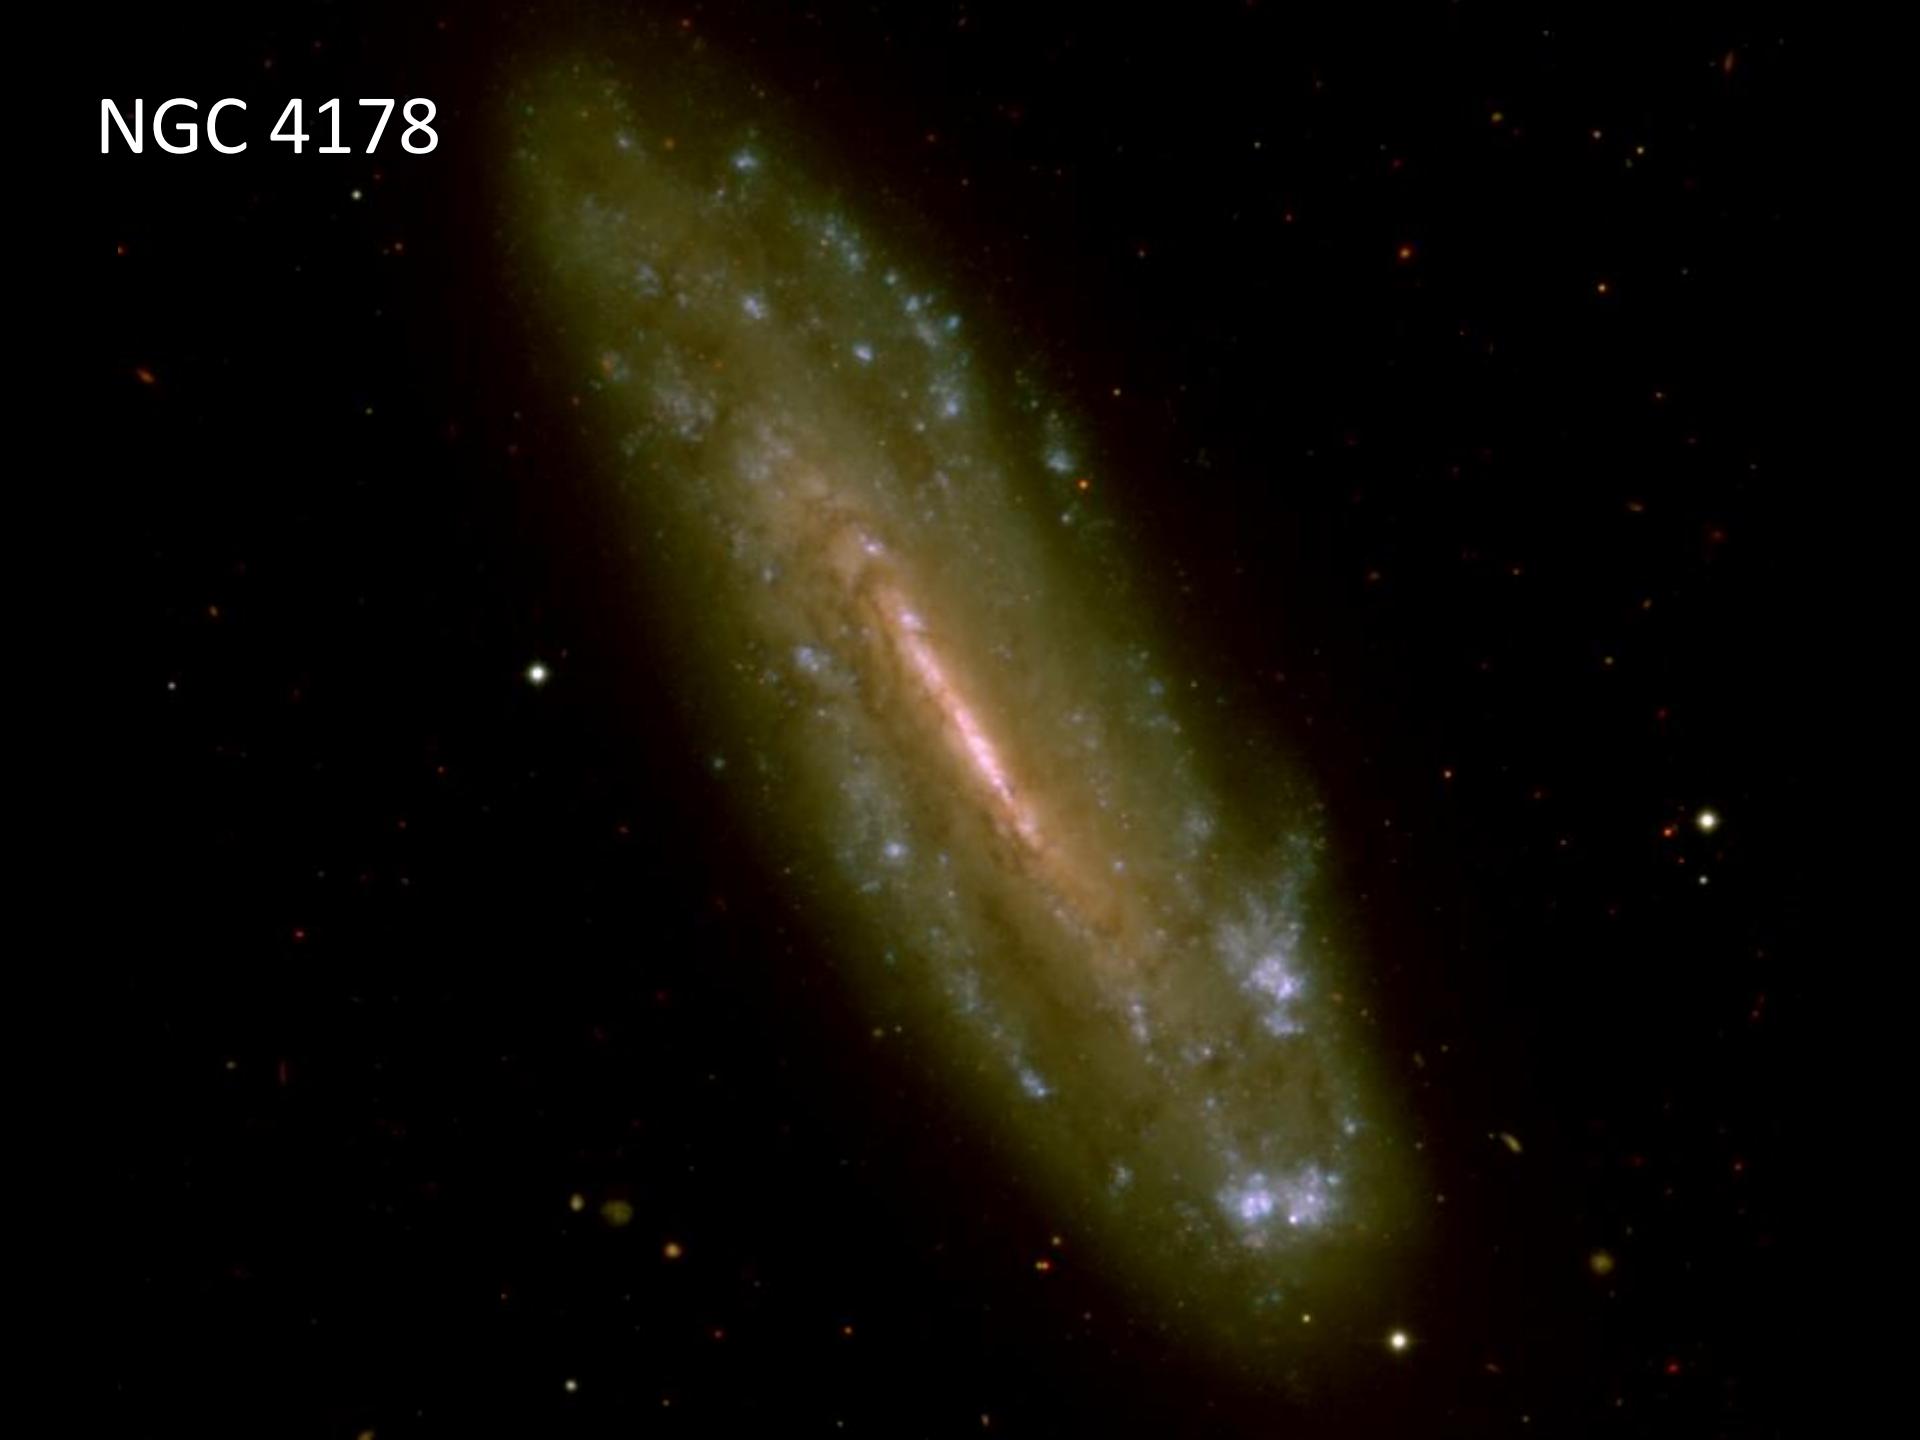

Small pitch angle = tightly wound arms = high BH mass
(Graham et al 2018, Davis et al 2017)

Search for IMBHs in the nuclei of bulgeless spirals

Galaxy	$M_{\text{bh}} (M_{*,\text{total}})$	$M_{\text{bh}} (\phi)$	$M_{\text{bh}} (\sigma)$
	M_{\odot}	M_{\odot}	M_{\odot}
3 estimates $< 10^5 M_{\odot}$			
N4178	3×10^4	2×10^4	1×10^3

Summary

- ULXs and nuclear BHs in Virgo spirals
- Comparison with results for ellipticals
- Search for IMBHs
- Coming soon:
 - *association with globular clusters, UCDs*
 - *H α counterparts (VESTIGE survey)*
 - *search for ULX radio bubbles*
